TITLE INDEX

A

abiotic factors effect on population fluctuation of alate aphids in wheat........367
adsorption equations for boron adsorption on calcareous soils.
Comparison of Freundlich and Langmuir........141
adsorption on calcareous soils.
Comparison of Freundlich and Langmuir adsorption equations for boron ........141
aggregate supply response model: a case study for Pakistan.
Growth in agricultural terms of trade and........411
agricultural technology in Punjab.
Effectiveness of information provided by farmers field school (ffs) staff for dissemination of ........291
agricultural terms of trade and aggregate supply response model: a case study for Pakistan.
Growth in........411
agro-grazing animals in irrigated Punjab.
Assessment of intensity of........389
agronomic traits and their influence on stem borer (Chilo agamennon Blles.) resistance.
Rice germplasm evaluation for........203
alate aphids in wheat.
Abiotic factors effect on population fluctuation of........367
animals in irrigated Punjab.
Assessment of intensity of agro-grazing........389
aphid dynamics in wheat as affected by weather and crop planting time........361
aphids in wheat.
Abiotic factors effect on population fluctuation of........367
application methods for wheat crop under rainfed conditions.
Efficiency of fertilizer........347
available soil moisture depletion levels and topping treatments on growth rate and total dry biomass in chickpea.
Effect of........229
Avena sativa L. cultivars for yield and quality.
Performance of early maturing oats........341
Wheat consumption pattern in Muzaffarabad........181
AZRI mung - 2006: a high yielding, short duration and bold seeded mungbean variety........299

B

Bangladesh.
Evaluation of pummelo, Citrus grandis L. cultivars in northern area of ........65
basmati rice.
Heritability, genetic advance and heterosis in line x tester crosses of........15
behaviour in regard to dairy products in Kosovo. Analysis of consumer ........281
berseem cotton rotation. Nitrogen management for cotton in ..........253
biofertilizers on foot/root rot and yield of bushbean in Fusarium oxysporum. Infested soil. Effect of seed treatment with rhizobium strains and ..........55
biomass in chickpea. Effect of available soil moisture depletion levels and topping treatments on growth rate and total dry ..........229
Bojanala district of north west province. Contract farming; a case study of small scale sunflower farmers in ..........187
bold seeded and disease resistant variety of mungbean. Chakwal Mung-6, a high yielding ..........309
bold seeded mungbean variety. AZPI Mung - 2006: a high yielding, short duration and ..........299
borer complex infestation in central Punjab, Pakistan. Screening of early and medium/late maturing sugarcane varieties/lines against ..........373
boron adsorption on calcareous soils. Comparison of Freundlich and Langmuir adsorption equations for ..........141
brinjal (Solanum melongena L.). Effect of different nitrogen levels on growth and yield of ..........245
broad leaved herbicides for weed control in wheat. Efficacy and economics of mixing of narrow and ..........355
broad sense heritability, characters association and path analysis. Evaluation of maize 3-way crosses through genetic variability ..........39
bushbean in Fusarium oxysporum infested soil. Effect of seed treatment with rhizobium strains and biofertilizers on foot/root rot and yield of ..........55

calcareous soils. Comparison of Freundlich and Langmuir adsorption equations for boron adsorption on ..........141
cane varieties in sugar industry and gur making. Role of ..........171
Chakwal Mung-6, a high yielding bold seeded and disease resistant variety of mungbean ..........309
characters association and path analysis. Evaluation of maize 3-way crosses through genetic variability, broad sense heritability ..........39
chickpea. Effect of available soil moisture depletion levels and topping treatments on growth rate and total dry biomass in ..........229
Chilo agamemnon Bles. resistance. Rice germplasm evaluation for agronomic traits and their influence on stem borer ..........203
Citrus grandis L. cultivars in northern area of Bangladesh. Evaluation of pummelo ..........65
combining ability analysis in maize under normal and high temperature conditions ..........27

combining ability for yield, yield components and quality characters in tomato (Lycopersicon esculentum Mill.). Analysis of........325

composition and some technological properties of African nutmeg (Monodora myristica) seeds. Proximate...........85

consumer behaviour in regard to dairy products in Kosovo. Analysis of........281

consumption pattern in Muzaffarabad, Azad Jammu and Kashmir (AJK). Wheat........181

contract farming: a case study of small scale sunflower farmers in Bojanal district of north west province........187

correlation and path analysis studies in garden pea (Pisum sativum L.). Genetic variability........333

cotton (Gossypium arboreum L.). Optimization of zeatin and explant types for efficient embryogenesis and plant regeneration of diploid........1

cotton (Gossypium hirsutum L.) genotypes for earliness. Variability in........215

cotton in berseem cotton rotation. Nitrogen management for........253

cotton rotation. Nitrogen management for cotton in berseem........253

crop planting time. Aphid dynamics in wheat as affected by weather and........361

cucumber (Cucumis sativus L.). Effect of different nitrogen levels on growth and yield of........259

Cucumis sativus L. Effect of different nitrogen levels on growth and yield of cucumber........259

D

Dachlor 50 EC for weed control in transplanted rice (Oryza sativa L.). Comparison of different doses of Machete 60 EC and........149

dairy products in Kosovo. Analysis of consumer behaviour in regard to........281

date palm cultivars with their monetary returns under ecological zone of Dera Ismail Khan. Evaluation of........93

Dera Ismail Khan. Evaluation of date palm cultivars with their monetary returns under ecological zone of........93

diploid cotton (Gossypium arboreum L.). Optimization of zeatin and explant types for efficient embryogenesis and plant regeneration of........1

disease resistant variety of mungbean. Chakwal Mung-6, a high yielding bold seeded and........309

dissemination of agricultural technology in Punjab. Effectiveness of information provided by farmers field school (FFS) staff for........291

dissemination of wheat production technologies and interface of out-reach efforts with farmers........99

E

earliness. Variability in cotton (Gossypium hirsutum L.) genotypes for........215

early and high yielding mutants of sesame (Sesamum indicum L.) for different genetic parameters. Evaluation of........125

earl early and medium/late maturing sugarcane varieties/lines against borer complex infestation in central Punjab, Pakistan. Screening of........373

early maturing oats (Avena sativa L.) cultivars for yield and quality. Performance of........341

ecological zone of Dera Ismail Khan. Evaluation of date palm cultivars with their monetary returns under ..........93

economics of mixing of narrow and broad leaved herbicides for weed control in wheat. Efficacy and..........355

embryogenesis and plant regeneration of diploid cotton (Gossypium arboreum L.). Optimization of zeatin and explant types for efficient........1

F

farm investment under open versus restricted access grazing: case of small-scale farmers in Limpopo province of South Africa. On........397

farmers field school (FFS) staff for dissemination of agricultural technology in Punjab. Effectiveness of information provided by........291

farmers in Bojanala district of north west province. Contract farming: a case study of small scale sunflower........187

farmers in Limpopo province of South Africa. On-farm investment under open versus restricted access grazing: case of small-scale........397

farmers. Dissemination of wheat production technologies and interface of out-reach efforts with.........99

farming: a case study of small scale sunflower farmers in Bojanala district of north west province. Contract........187

fertilizer application methods for wheat crop under rainfed conditions. Efficiency of........347

field school (FFS) staff for dissemination of agricultural technology in Punjab. Effectiveness of information provided by farmers........291

financial viability of long term investment in guava orchards in Sindh province of Pakistan. Analysis of........267

foot/root rot and yield of bushbean in Fusarium oxysporum infested soil. Effect of seed treatment with rhizobium strains and biofertilizers on........55

Freundlich and Langmuir adsorption equations for boron adsorption on calcareous soils. Comparison of........141

fruit products by monitoring microbial growth and sensorial excellence. Study on shelf life of stored jamun.........379

fruit products during storage. Study on off-colouring of jamun........77 Fusarium oxysporum infested soil. Effect of seed treatment with rhizobium strains and biofertilizers on foot/root rot and yield of bushbean in ........55

G

garden pea (Pisum sativum L.). Genetic variability, correlation and path analysis studies in ..........333

genetic advance and heterosis in line x tester crosses of basmati rice. Heritability..........15
genetic mechanism of some physiological traits in spring wheat at two plant population regimes........315

genetic parameters.
Evaluation of early and high yielding mutants of sesame (Sesamum indicum L.) for different........125

genetic variability, broad sense heritability, characters association and path analysis. Evaluation of maize 3-way crosses through........39

genetic variability, correlation and path analysis studies in garden pea (Pisum sativum L.)........333

genotypes for earliness. Variability in cotton (Gossypium hirsutum L.)........215

germplasm evaluation for agronomic traits and their influence on stem borer (Chilo agamemnon Blas.) resistance. Rice........203

Gossypium arboreum L.
Optimization of zeatin and explant types for efficient embryogenesis and plant regeneration of diploid cotton.........1

Gossypium hirsutum L. genotypes for earliness. Variability in cotton........215

grazing animals in irrigated Punjab. Assessment of intensity of agro........389

grazing: case of small-scale farmers in Limpopo province of South Africa. On-farm investment under open versus restricted access........397

growth and yield of brinjal (Solanum melongena L.). Effect of different nitrogen levels on........245

growth and yield of cucumber (Cucumis sativus L.). Effect of different nitrogen levels on........259

growth rate and total dry biomass in chickpea. Effect of available soil moisture depletion levels and topping treatments on........229

growth, yield and weeds control in maize, Zea mays L.
Effect of a new post emergence herbicide application in combination with urea on........157

guava orchards in Sindh province of Pakistan. Analysis of financial viability of long term investment in........257

gur making. Role of cane varieties in sugar industry and........171

H

herbicide application in combination with urea on growth, yield and weeds control in maize, Zea mays L.
Effect of a new post emergence........157

herbicides for weed control in wheat. Efficacy and economics of mixing of narrow and broad leaved........355

heritability, characters association and path analysis. Evaluation of maize 3-way crosses through genetic variability, broad sense........39

heritability, genetic advance and heterosis in line x tester crosses of basmati rice........15

heterosis in line x tester crosses of basmati rice. Heritability, genetic advance and........15

high temperature conditions. Combining ability analysis in maize under normal and........27

high yielding bold seeded and disease resistant variety of mungbean. Chakwal Mung-6 a........309

high yielding mutants of sesame
(Sesaminum indicum L.) for different genetic
parameters.
Evaluation of early and...........125

high yielding, short duration and bold
seeded mungbean variety.
AZRI Mung - 2006: a ........299
